BOOK SYNOPSIS

The Third Edition of *Biology: Science for Life with Physiology* continues to draw readers into biology through engaging stories that make difficult topics more accessible and understandable. Colleen Belk and Virginia Borden strive to make teaching and learning biology a better experience from both sides of the desk. The authors draw from their teaching experiences to create a book with a flowing narrative and innovative features that require readers to become more active participants in their learning. Each chapter presents the material through a story that draws from real life examples, making the reading more engaging and accessible to today's readers. These stories strive to demystify topics found in biology. The Third Edition of this book features a completely re-designed art program and uses the authors' teaching experiences to create reader-centered features such as the new Savvy Reader, Visualize This, and Stop and Stretch to motivate and encourage reader learning. The new A Closer Look allows instructors the opportunity to expand on certain important biological topics. For instructors who do not cover topics related to physiology, an alternate edition of this book, *Biology: Science for Life*, is also available. This text now includes access to MasteringBiology(R). All of the resources previously found on mybiology are now located within the Study Area of MasteringBiology.
